VISUAL SUPPORT TOOLS FOR AUTISM

# Free visual communication cards

Designed around Rocco. Shared for understanding.

These original illustrated cards were created by Ashlee Savia DeConinck for her Visual Support Tools series, with the child illustrations modeled on her son, Rocco. They are illustrations, not documentary photographs.

Shared freely for children, families, educators, caregivers, and support teams.

## What is inside

59 different cards on 15 sheets. No repeated cards in this collection.

PDF pages 2-6: communication, body needs, and feelings.

PDF pages 7-11: people, vehicles, places, hygiene, and comfort.

PDF page 12: care and assessment.

PDF pages 13-16: body parts.

## Printing and personal use

Print only the pages you want. The PDF uses US Letter pages.

For A4 or other paper, choose Fit and check the print preview.

Keep labels with their pictures. Use a whole sheet or cut individual cards.

The card list is also available as readable text on the website.

A picture may mean something different to each person. Ask what fits. These cards do not replace an existing communication system, individual assessment, emergency procedures, or clinical care. Pictures are not evidence of consent, a diagnosis, or a guarantee of understanding.

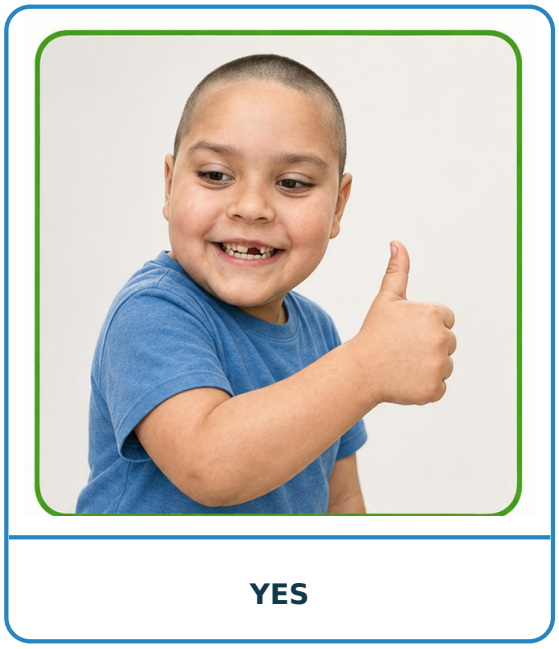

Free for personal, classroom, and care support use with creator credit.
Not for resale or republication as your own work. See website terms.
